Summer 2020 - CS 621 Advanced Web Applications
Extra Homework

Objectives:

- Python Practice

  In this hw, you will create a python program to read the `company_records.csv` file and find the answers for the following questions;
    o What is the budget of each department (total salary)?
    o How many unique salaries the company has, what are they?
    o Find the employees with the minimum and maximum salaries, display their full information
    o Which department has the highest budget?
    o Display the list of the departments with the total number of employees

- It is your task to decide the most suitable data structures to solve these questions. Do not hard code any information, your code should be able to find these values for any given similar `.csv` file
